

A need for a change

Why we changed

Project focus

- × Build a community
- × Capture excitement
- × Grow

Limits

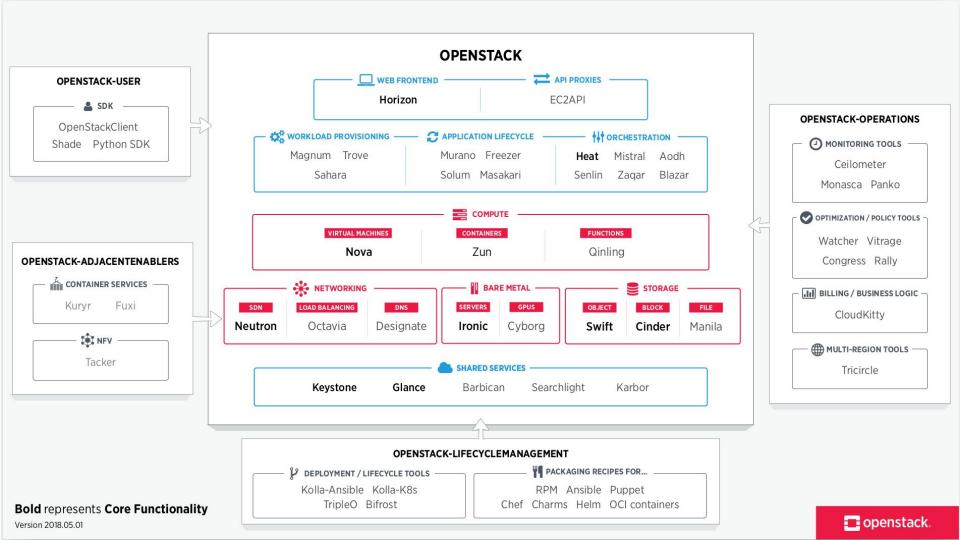

The project-centric model served us well, but it started hurting more than it helped.

A better defined OpenStack

Creating a map of OpenStack helped in defining what it is, and what it is not.

A great CI system

But nobody else was using it as it was seen as OpenStack-specific.

Demand for more

Nascent open source communities love our principles and the way we run projects, but their product is not "OpenStack".

Embracing !! the edge

There is a need for open source infrastructure solutions at the edge, and it's different from traditional datacenter cloud needs.

Integration is the last mile

Open source technologies rule the world, but integrating them is still hard.

2.Our original motivation

What we are here for

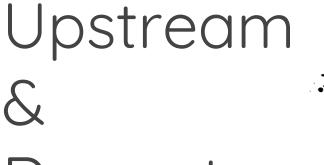

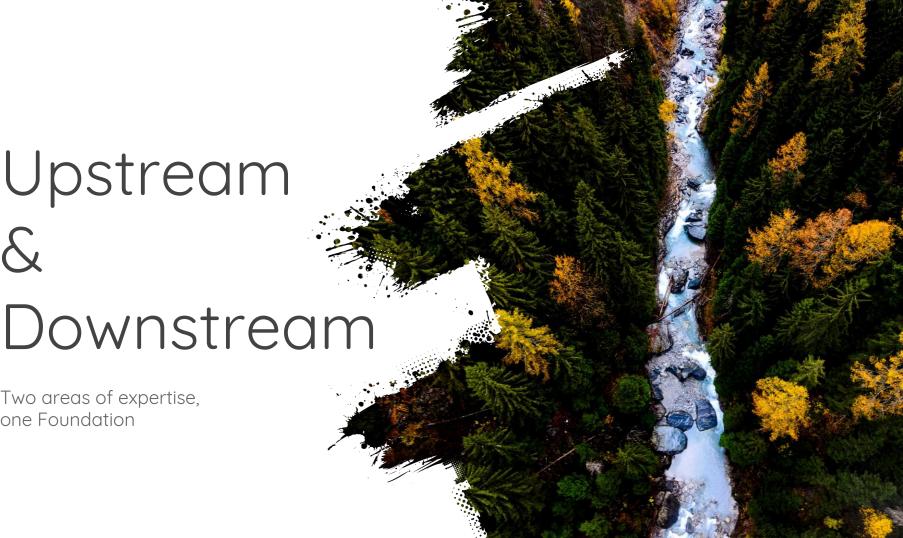

"To go fast, go alone. To go far, go together."

Two areas of expertise, one Foundation

Having fun

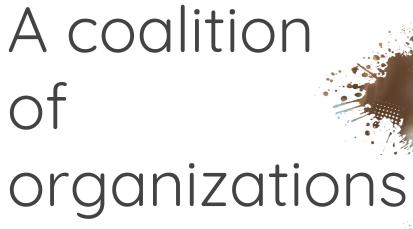

Great food, wine, good friends, long-lasting relationships, karaoke #mustbeopenstack

3.What we built

Take stock of our assets

Aligned on the need for open infrastructure

A network of events

Global OpenStack Summits Local OpenStack Days Meetups Project Teams Gatherings

A user community

Engaged and willing to share their experiences

The state of the s

An openly-operated set of services doing CI at unprecedented scale

4.
The new approach

What happened over the last 6 months

Discussion shift

Discussion shift

From project-oriented

Create a solution Build software OpenStack

Discussion shift

From project-oriented

Create a solution Build software OpenStack

To goal-oriented

Solve problems Integrate solutions Open infrastructure

COLLABORATE **FIND THE COMMON USE CASES** NEW TECHNOLOGY TEST EVERYTHING

ODENSTACK FOR

EGRATION

Focus areas

- × Datacenter cloud
- × Edge
- × Container infrastructure
- × CI/CD

COLLABORATE **FIND THE COMMON USE CASES** NEW TECHNOLOGY TEST EVERYTHING

ODENSTACK FOR

EGRATION

OpenStack

- × Cloud infrastructure
- × 7000 contributors since 2012
- × 80,000 changes merged in 2017
- × 17th release (Queens) in February

Kata containers

- × Secure container runtime
- × Code from Intel and Hyper.sh
- × 35 contributors, 1250 commits
- \times V1.0

Zuul

- × Scalable CI engine
- × "Stop merging broken code"
- × 80 contributors, 4200 commits
- × v3.0 last March, now at 3.0.3

5. Consequences

Where does that leave us?

For the Foundation

- × Not just "OpenStack"
- × Branding
- × Bylaws
- × Internal organization

For OpenStack

- × Opportunity to focus / refine
- × Reusable components

For our infra

- × Serve more than just "OpenStack"
- × Governance to be defined
- × Potential new resources

6. Limits

Reaffirming our base principles

The 4 Opens

- × Open source
- × Open development
- × Open design
- × Open community

Basic governance

- × Contributor-driven bodies
- × Only where decisions are needed
- × Aligned with constituency

Complementarity

- × An overarching story
- × Synergy between projects
- × Forum session, Thursday 3:30pm
