

# OpenStack Data Jurisdiction Compliance in Hybrid Clouds

---

<https://etherpad.openstack.org/p/hybrid-geo>

Steven Woodward, CEO, Cloud Perspectives  
CCSK, CSQA, CFPS

# Agenda

---

Introductions

Objectives

Hybrid and Federation

Data Jurisdictions

New Cloud Perspectives

OpenStack Fit and inTOS lessons

Summary Perspectives Potential Actions

# Steven Woodward Industry and International Participation

---

ISO SC38 (Cloud Computing) SC7 (Systems)  
NIST Cloud Contributor and Co-Lead  
IEEE – Contributor  
Cloud Security Alliance  
OMG – Cloud Standards Customer Council

IFPUG Chair Industry Standards Committee  
ITU-T (United Nations) Cloud Contributor  
OWASP – presenter/ collaborator  
TM Forum, Quest Forum  
OpenStack, itSMF, ICEAA, IIBA, ISACA

**Consumer/  
Customer**

**Fostering Collaboration**

**Providers/  
Partners**

**Contributing vision and strategy to IntOS OpenStack  
powered enterprise cloud development**

# About IntOS

---

IntOS is a self-maintained enterprise grade OpenStack distribution, developed and supported by ComputingStack (see [www.computingstack.com](http://www.computingstack.com)).

IntOS is highly resilient, agile, scalable, efficient and secure by design, while providing a simplified user experience to architect and efficiently deploy complex OpenStack solutions.

Major services include: Compute, Software Defined Storage, SDN, Container/Kubernetes as a service (by Magnum).

IntOS provides key governance capabilities by design, while incrementally incorporating Cloud 2.0 services for NFV, Edge, IoT and AI.

Based in Ottawa On Canada, ComputingStack also supports Academia and Research communities by offering cloud out of box, operation and support.

# Objectives

---

Present hybrid-cloud and geo-jurisdiction international considerations

Interactive exchange of information and perspectives

Awareness of cloud federation activities

Identify OpenStack and InTOS components impacted and lessons

Filling gaps and integration

Identify future activities for OpenStack consideration

# Hybrid Cloud

---

Public Cloud  
Private Cloud  
Community Cloud

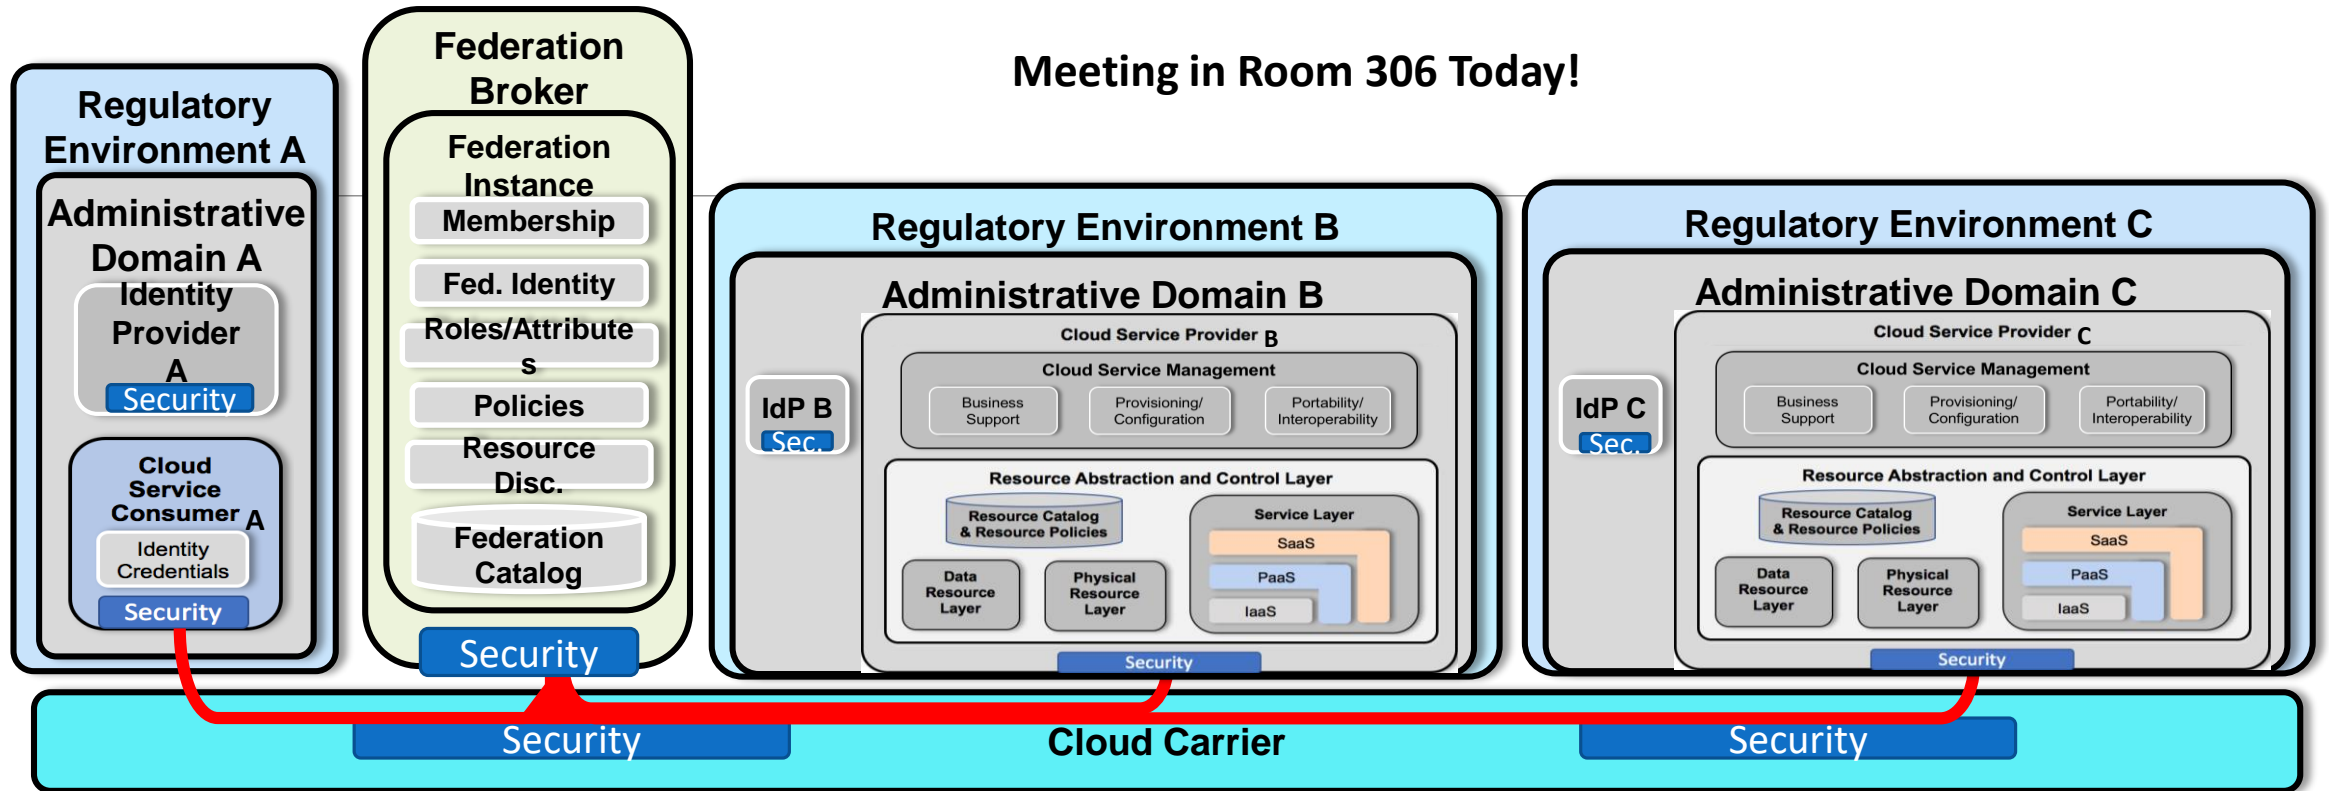

## Hybrid

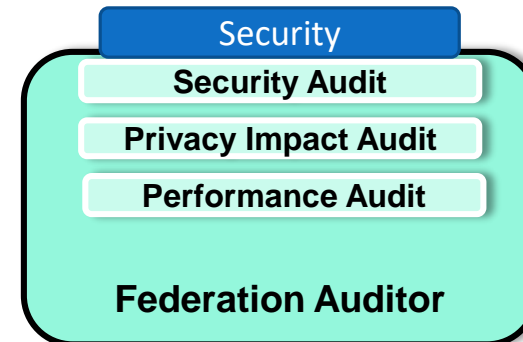

Binds together enabling:  
Interoperability  
Data Portability  
Application Portability

## Automation

# Draft Cloud Federation RA Concept - NIST IEEE P2302

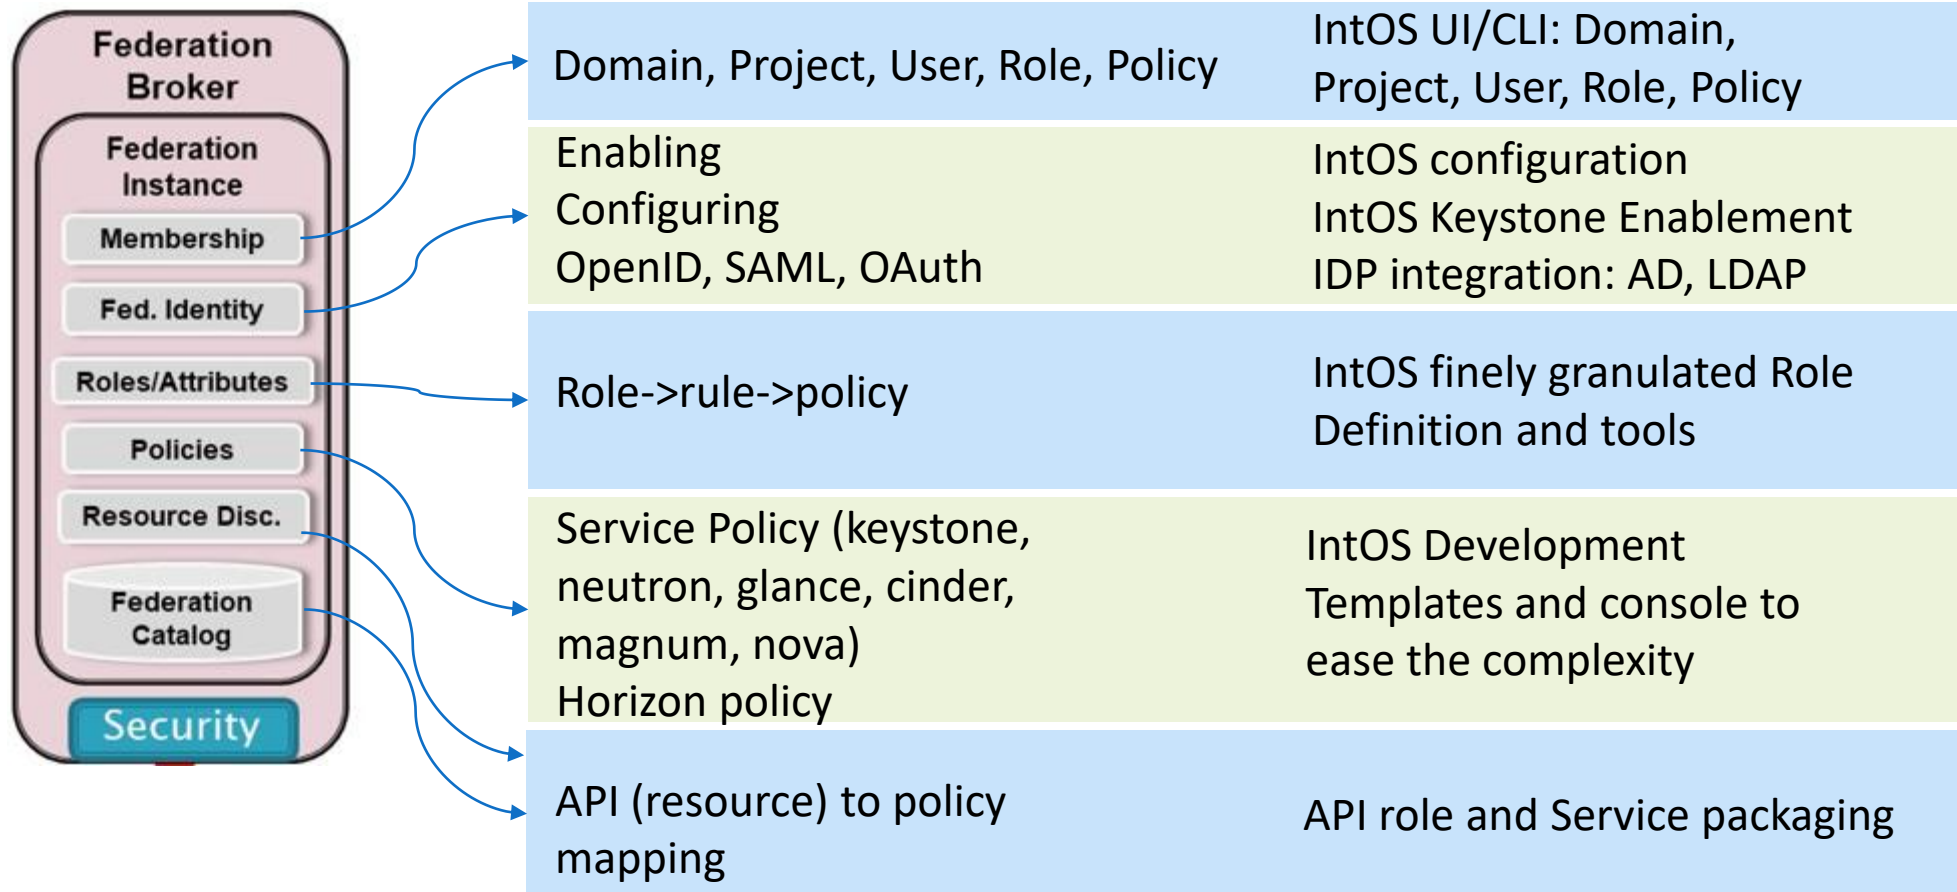

- Security:
- Identity/Authentication
  - Authorization/Policy
  - Integrity
  - Privacy
  - Non-repudiation

# Mapping Concept Model thru Open Source to Implementation

**NIST/IEEE**

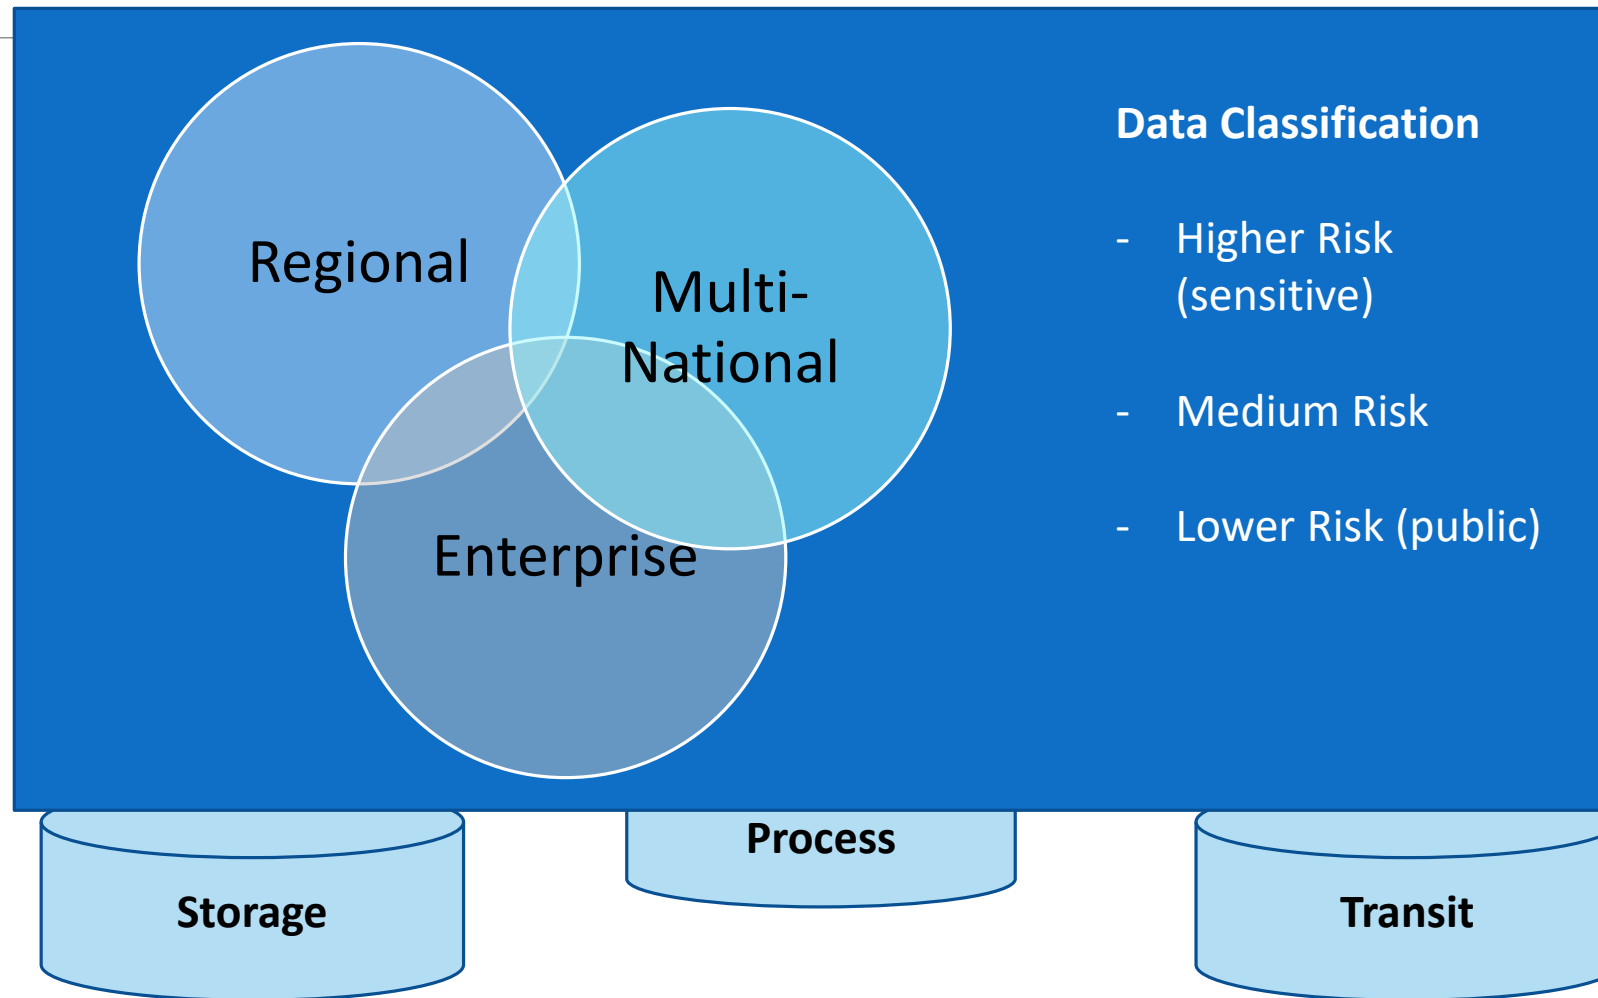

GDPR

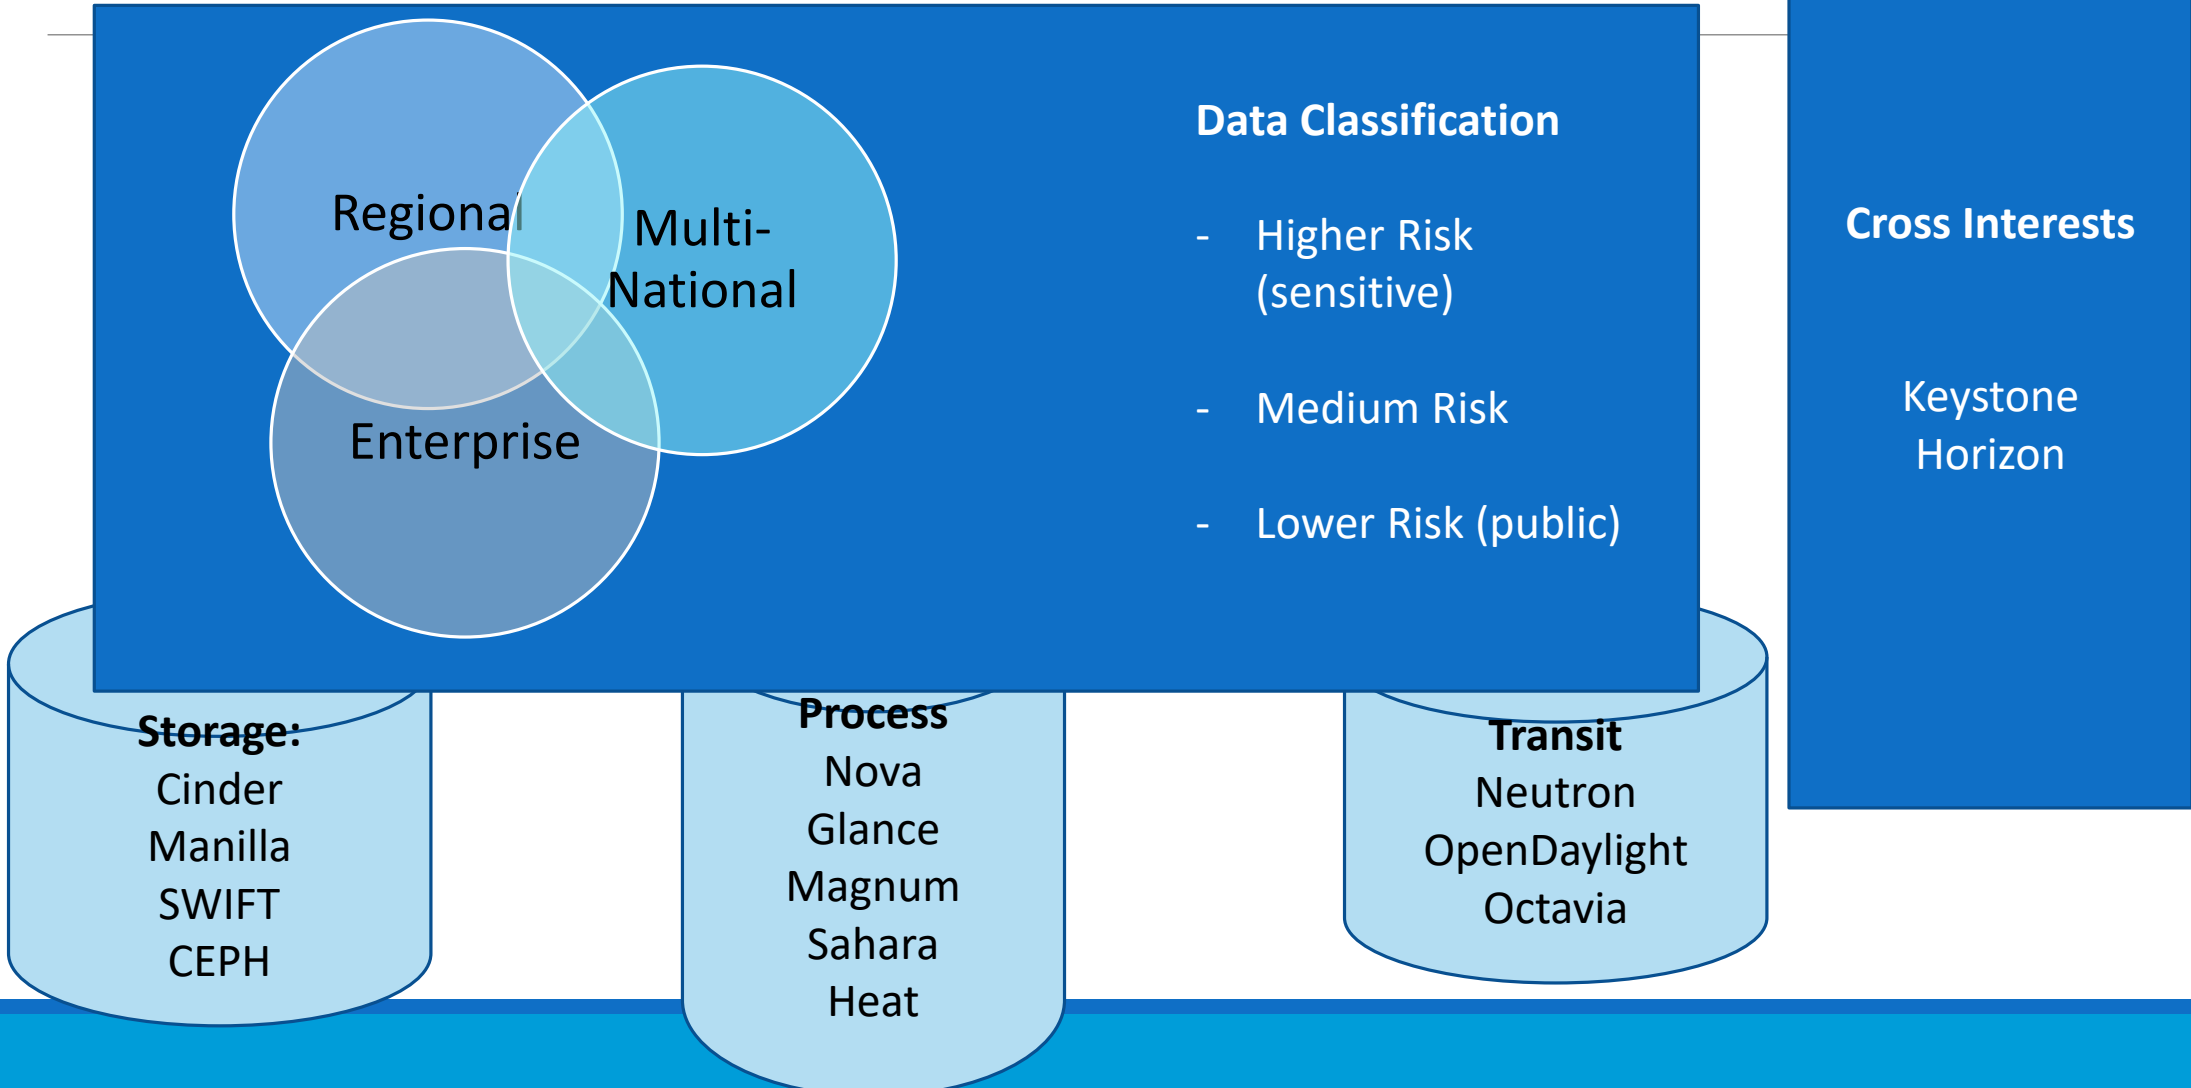

# Geo-Jurisdictions

## Valid Reasons to Care or Not?

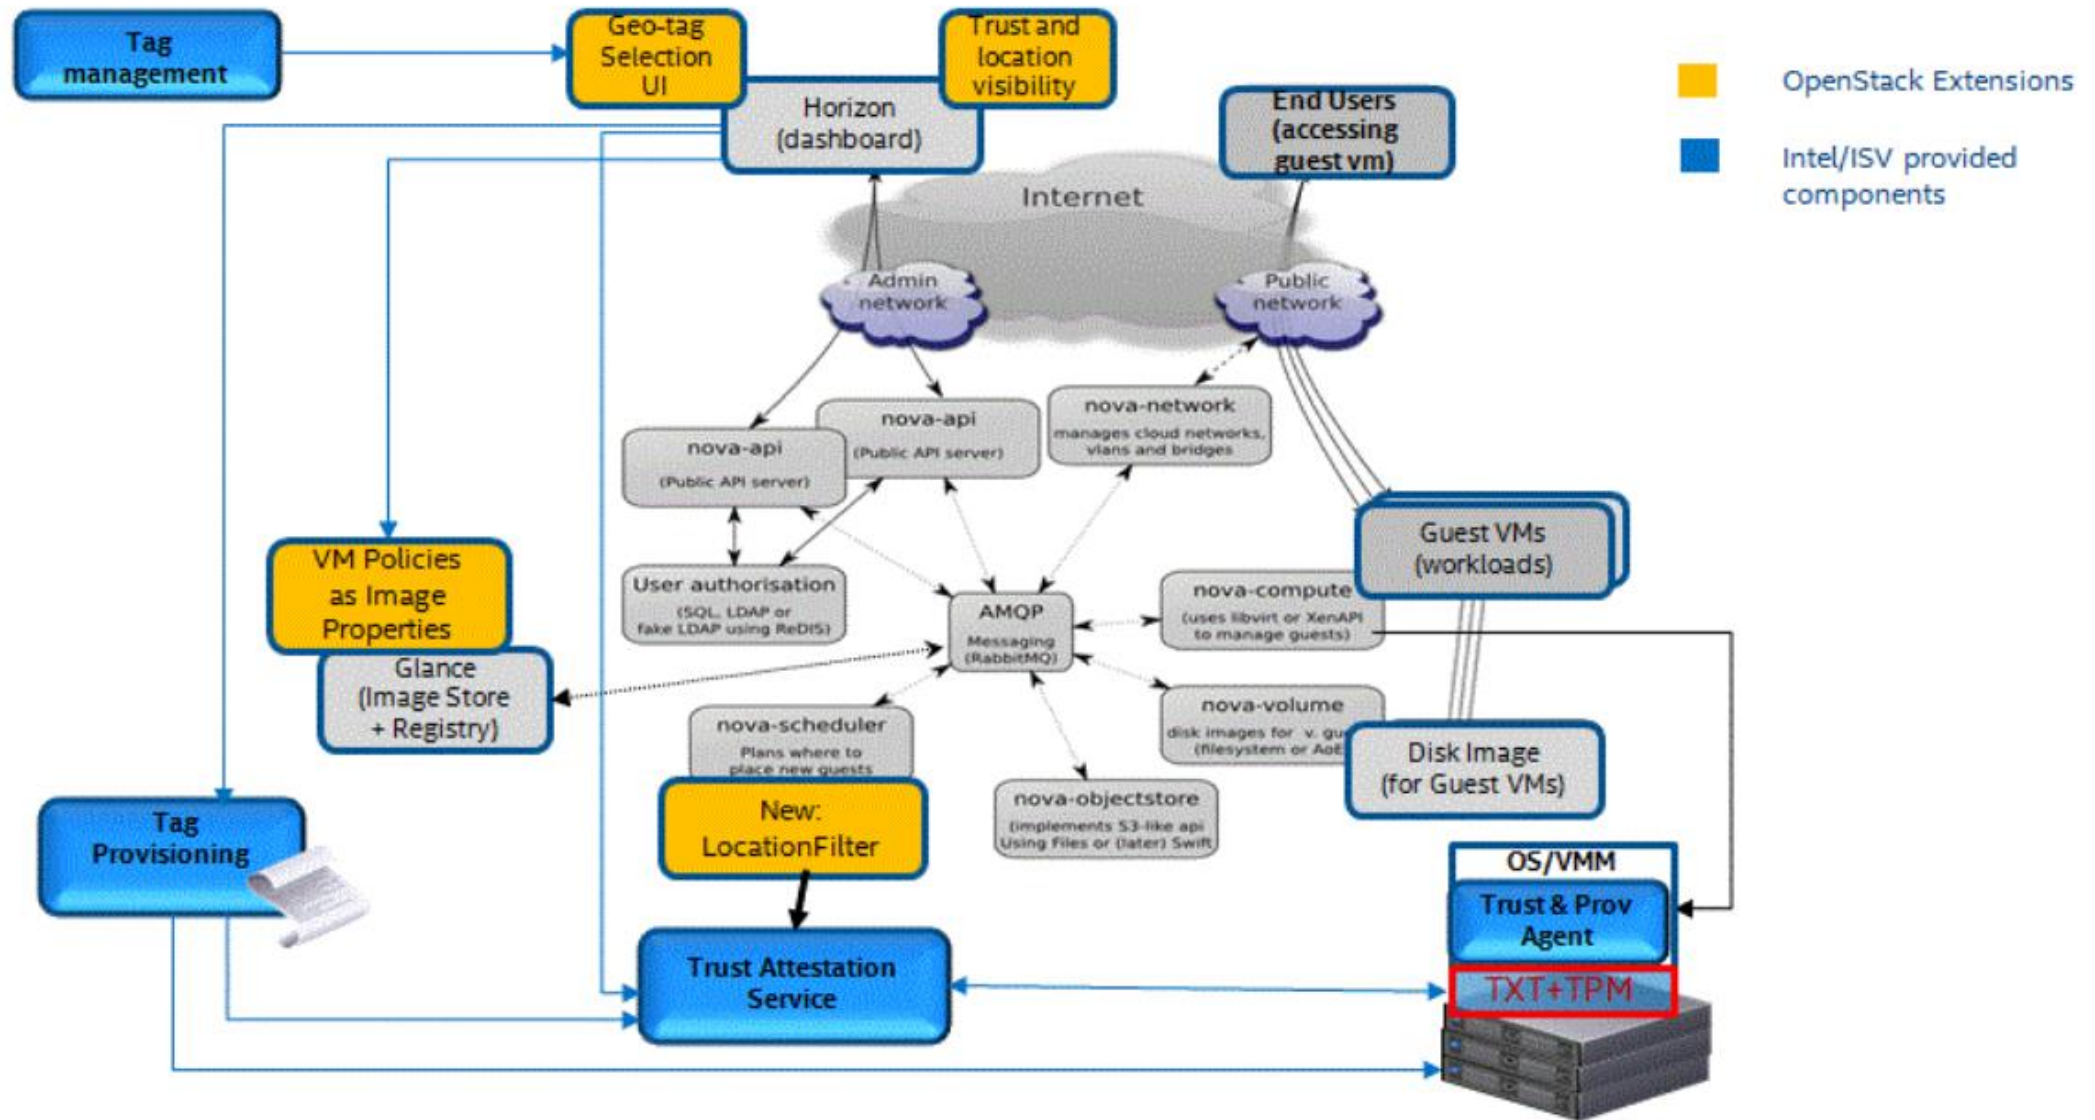

# Geo-Jurisdictions ISO SC38 Concept Model

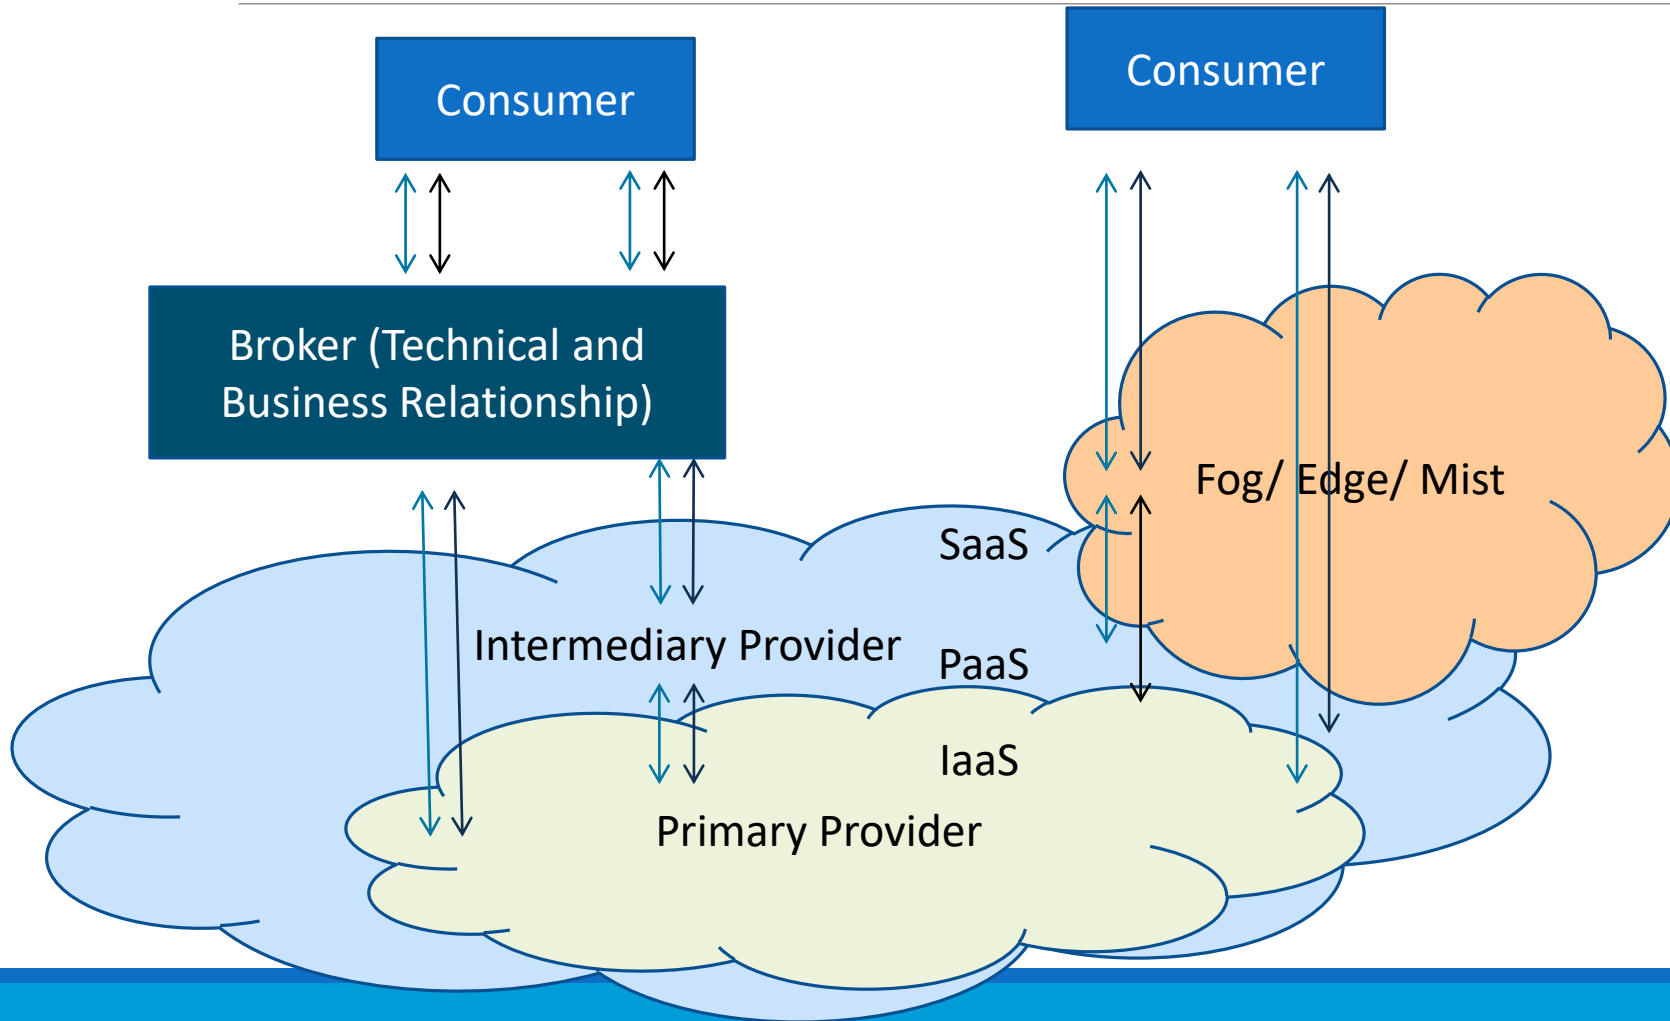

# Geo-Jurisdictions Concept Incorporating inTOS and OpenStack Elements

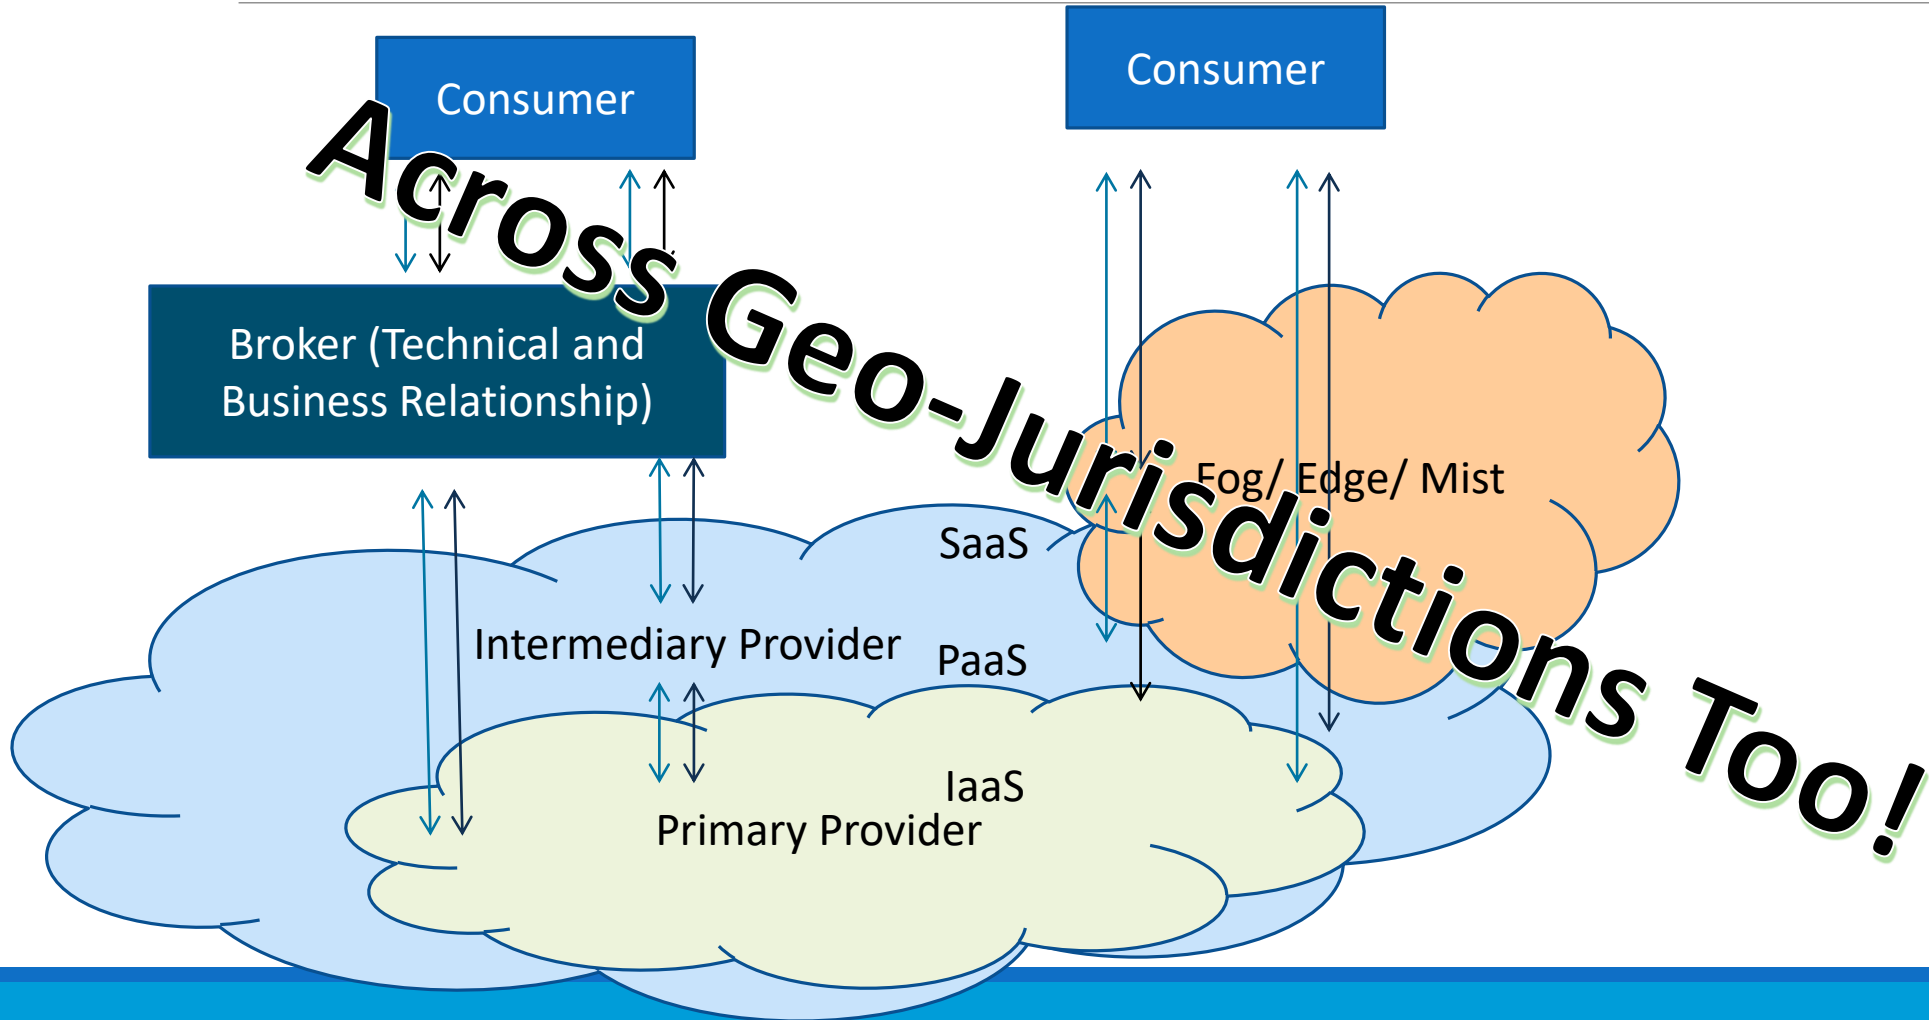

# OpenStack Trusted Location Control

# Updated Perspectives

# Updated Perspectives

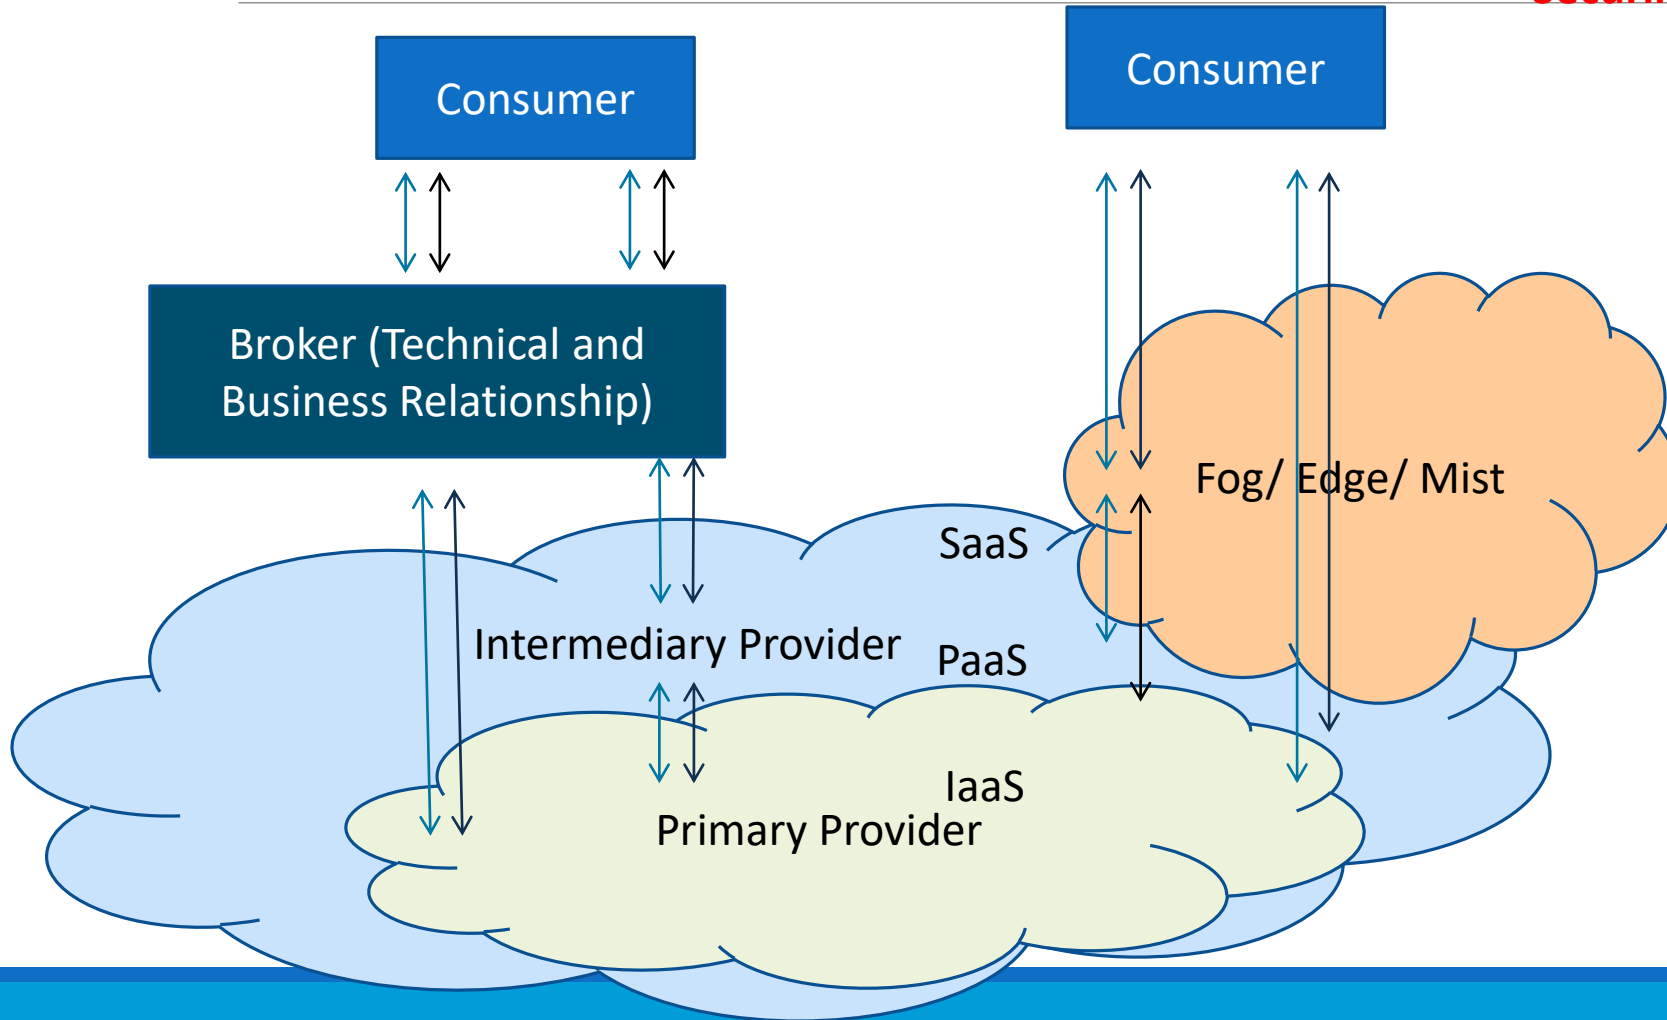

# Compliance and Controls Sets Vary!

Securing IoT Devices Often at the Edge

This Photo by Unknown Author is licensed under [CC BY-SA](#)

# Also Integration of Non OpenStack Services

---

**Eco-system includes a variety of products and services across service and deployment models:**

Standards (ISO, IEC, IEEE, ETSI, ITU-T, NIST)

Open Groups (Open Grid Forum, The Open Group, ONFV, OSF, Open GeoSpatial Consortium, ORCA)

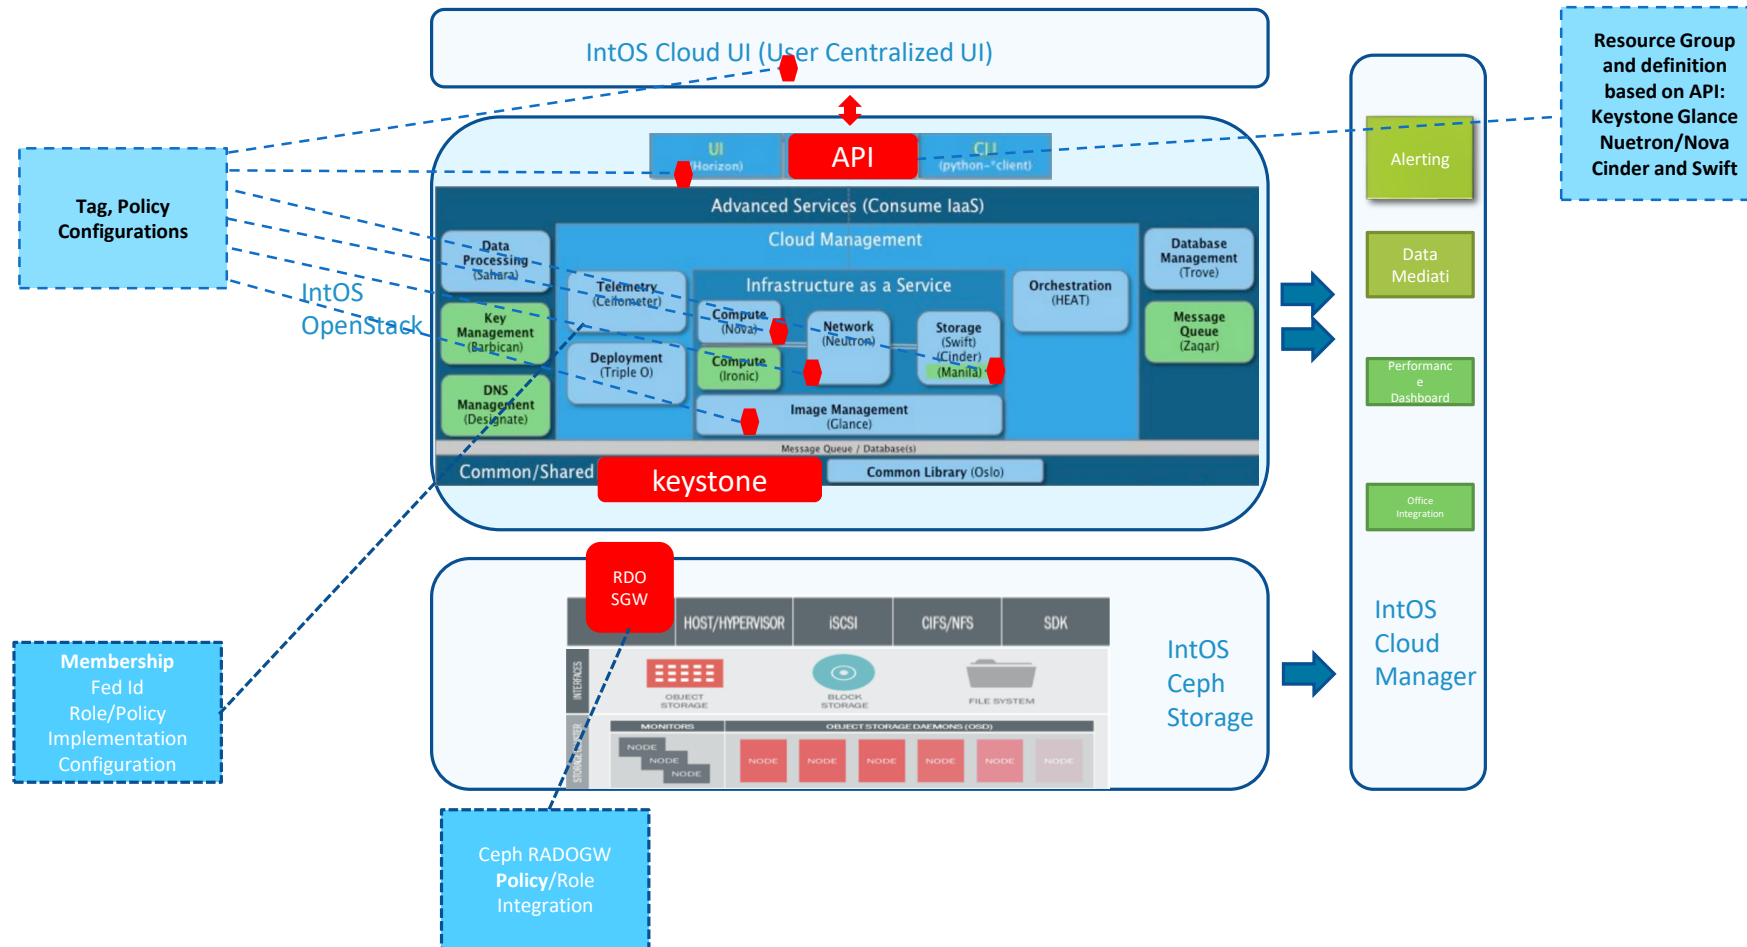

Communities (TM Forum, DMTF, ENISA, OMG, ISACA, CSA, CENGN)

Proprietary (Based on OpenStack and Not)

## **Research and Participate**

# IntOS Benefits from Mapping of OpenStack Elements Impacted

# Lessons learned IntOS compliance

---

Reference Architecture and Enterprise Architecture models help (common understanding)

GPDR has driven geo-jurisdiction and portability discussions to the front of the line

OpenStack has a variety of tools and techniques supporting geo-jurisdiction and hybrid cloud deployment and governance that can be extended

Keystone Identity & Policy Management at the centre

## **Not magic – Complex Challenges – Is Executable**

- Objectives and targeted outcomes vary
- Planning and architecting required
- Focus on your priority use cases
- Create and refine your own checklists, while embracing automation
- Trial and demonstrate capabilities (incremental progress)

# Capability – Action Request

Element	Hybrid – Interoperability – Federation – Scenario/ Increment 1	Geo-Jurisdictions – Scenario/ Increment 1	Edge – Scenario/ Increment 1
Keystone - Identity			
Glance - Images			
Nova - Scheduler			
Ceph – Storage			
OpenDayLight			

Functionally Mature?

Performance?

Security?

Automation?

## OPEN YOUR DOOR WITH YOUR PHONE

### Let yourself in with Digital Key

HI STEVEN,

Open your door with Digital Key\* using your iPhone or Android device. Follow the simple steps below to breeze through check-in and start your stay sooner with the Hilton Honors app.

**1** Check in and choose your room

Select [Digital Key](#)

Login to the app and use your phone as your room key. Don't forget you can use your Digital Key to enter the fitness center, business center, hotel floor from the elevator or anywhere else that requires a room key.

[Check in >](#)

Well That's  
Interesting!

.....

It must be  
secure...right?
