Twitter: @ColdrickSotK @knelson92 -----

Agenda

- 1) What is the great migration, and why are we doing it?
- 2) Frequently asked questions about migrating, including...
- 3) How do I use this StoryBoard thingy anyway?

Why StoryBoard?

Because We Said So.. but not really

- Launchpad is limited and not set up for cross project collaboration
- API First
- Helps us unify tools
- Last step towards separation from UbuntuOne

Migration Process

Can My Project Migrate?

- First Question: Is your project laden with cross project bugs?
- Second Question: Is your project managed by the Vulnerability Management Team?
- Third Question: Does the project hit errors when we run a practice migration into a dump of production data?
- If the answer is 'No' to all the questions we can migrate your project right now

The Great Migration

- We create the project in StoryBoard - you just need to set 'use-storyboard: true' in `project_config/gerrit/projects.yaml` !
- We run the script to move bugs over
- Goodbye Launchpad!

Using Storyboard

Create a Story

- A story is a goal, or a set of requirements
- A story has one or more tasks required to complete the story
- A story can be relevant to multiple projects at a time
- Stories are easy to create!

- Item 10

Create a Task

- Tasks are small, specific units of work-- **what** you are doing
- Each task is associated with a project
- Tasks have statuses (todo, in review, merged)

But where is priority?

Answer: There's a long blogpost on that so that's where the detail is; key is: put tasks in a **worklist!**

Create a Worklist

- Way of organizing tasks and stories
 - Could make a list for each release or milestone
 - Items in a worklist could be ordered by priority
 - Different groups can assign the same sets of tasks different priorities
- Worklists can contain stories and tasks from multiple projects

Adams's World of ...

Get the Adams's World of ...

Create a Board

- Kanban board functionality
- Track tasks and stories across arbitrary lanes
- Automatic lanes provide an overview of the state of things you care about

Storyboard Status Board

Item	Status
Item 1	Completed
Item 2	In Progress
Item 3	Not Started
Item 4	Completed
Item 5	In Progress
Item 6	Not Started
Item 7	Completed
Item 8	In Progress
Item 9	Not Started
Item 10	Completed

Questions?

Frequently Asked Questions

- What about gerrit integration? **Yes, it's there**
- What happens to bug links? **Bug numbers == Story numbers**
- What happens to blueprints? **Not currently being migrated**
- How do I close a task? **Mark it as 'merged'**
- Are there tags? **Yes, anyone can add any tags to stories**
- Will I be able to write scripts for it? **Yes, there is a REST API**
- Why not use this other task tracker instead? **GO AWAY**
